

CivicAI Connected urban forest

BLUEPRINT #1/3

CivicAI is a project exploring how AI can enhance collective intelligence to help communities respond to the climate crisis through three near-future use cases. [Read more at civic-ai.org](#)

Connected urban forest combines automated and participatory processes for mapping, monitoring, caring for, and measuring the holistic benefits of urban trees.

The Blueprint outlines how people and machines could collaborate in this area. It provides an overview of opportunities for implementing community-led AI systems, as well as a framework for connecting organisations who share common challenges or are developing potential solutions.
